

LAB: Final Project

Lesson Time: 3 Hours

For this final project we'll put together a bootstrap site with some dynamic content. Your goal in this lab is to re-create the site described below.

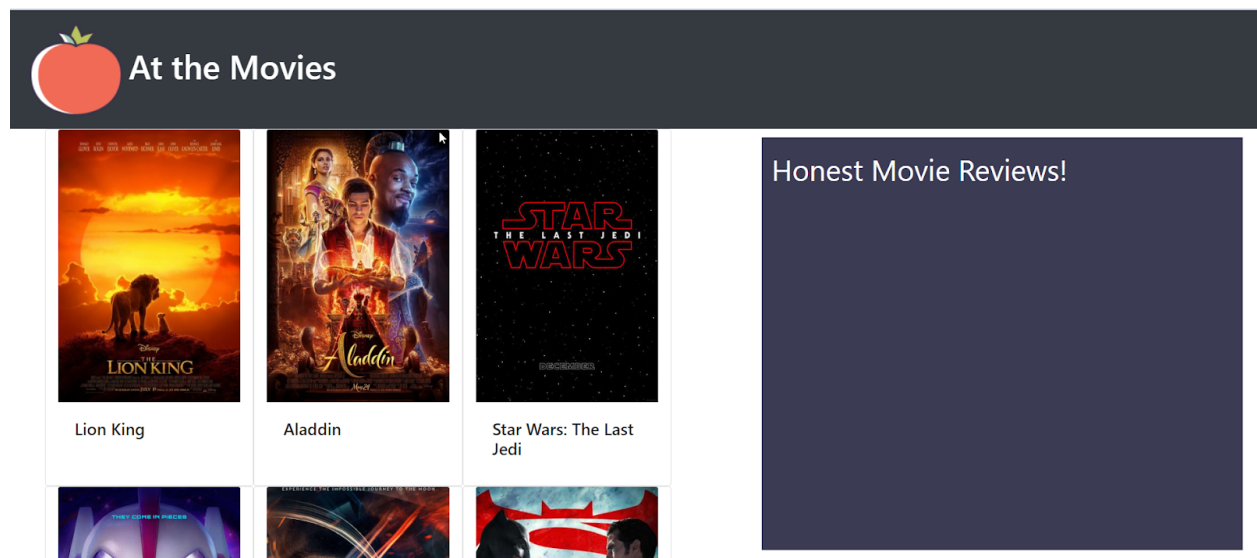

Our site is called At The Movies, and the site is intended to be a humorous movie review page--all reviews for the movies are bad reviews.

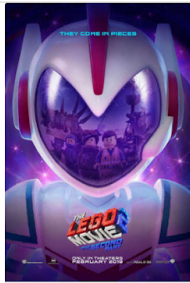

All of the images for the page can be found in your course files. The site should use the following;

1. Be Bootstrap based. Use a bootstrap navbar for the top of the page.
2. Use Bootstrap Cards to create the list of movies in a nice 3 column layout
3. A panel on the right side of the screen will show the review when the movie is clicked on.
4. The content of the review should come from the reviews.json file saved on our [course github](https://raw.githubusercontent.com/Steve-Rossiter/SD101/master/movieprojectfiles/reviews.json). An AJAX call should read the json file and display the CORRECT review for the movie the user clicked on.

Link to course github with JSON data and images.

The Lego Movie 2

First Man

Batman Vs
Superman

4

As an optional, extra challenge, try creating a front page for the site that displays the movie images in a bootstrap carousel .
