

# LAB: CSS Positioning

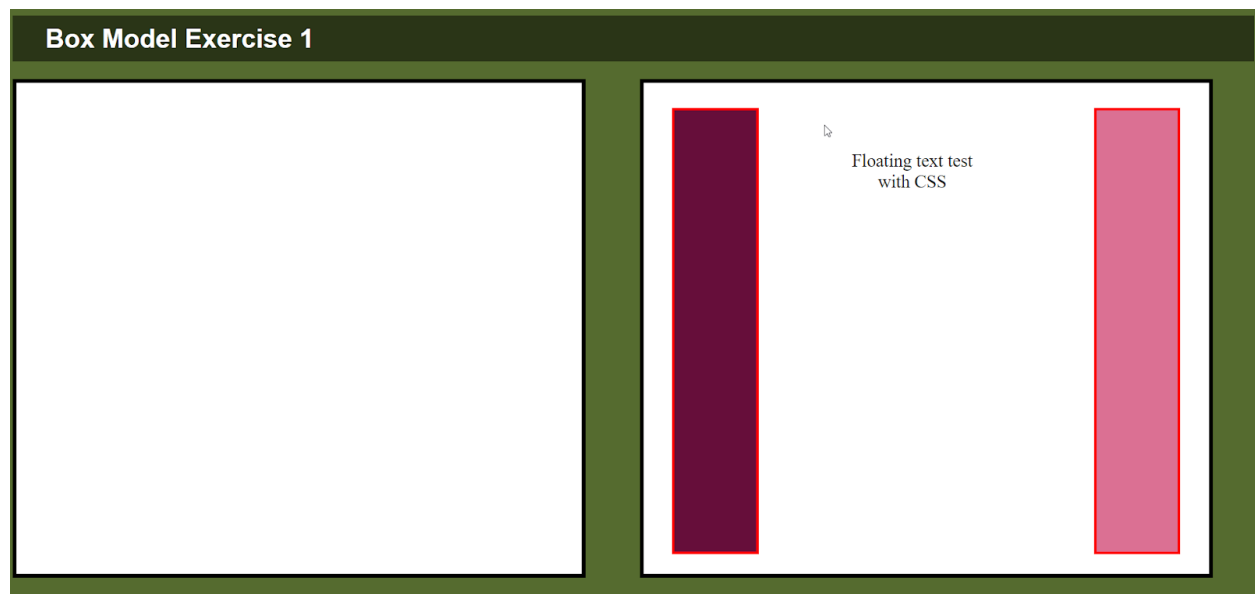

Lesson Time: 60 Minutes

Begin this lab by reviewing the position with the resources below.

<https://learnlayout.com/position.html>

<https://learnlayout.com/position-example.html>

We will recreate this web image using only CSS Position. Do not “cheat” and use flexbox! Yes, flexbox is easier and recommended, but this exercise is all about mastering Position.

Download the lesson 5 position.html to get started. Create the position.css file to achieve the layout shown in the picture.

## HINTS:

1. We've created a generic .container with a relative position.
2. We've created .left and .right boxes with absolute position to place the two white boxes in the layout.
