LAB: HTML/CSS Website

Lesson Time: 180 Minutes

Continuing with the NavBar and Layout you've created today, practice building a 3 page website. Each page should use the same layout you created in the previous exercise. Take the time to make your site look as great as possible.

For this lab, you will use everything you've learned up to now. Your web site should include HTML tables, lists, hyperlinks, and images. All links and images on your page should work properly and everything should be presented in a great CSS design.
